

FENCING

A house gets its complete frame with the fencing around it. In fact, the fence around the premise adds a total effect, which highlights the framework of the house as well as it sets a subtle line of control for the people inside the house or the people outside the fence. Therefore, fencing of a home is of a pivotal significance, and the best part of it is that different types of fences can be used around your property.

2023 FENCES BROCHURE >>

Onn interior is an interior and architecture design studio that boasts of creating exceptional spaces .It specializes in multi-unit developments, hospitality, and also private residentials. It is considered one of the go-to interior design companies for the high end and the world's finest hotels. Among the few top hotels designed by this firm is Jumeirah, Park Hyatt, Four Seasons Hotels&Resorts, and also the InterContinental Hotels.We provide all types of interior design & architectural services such as exterior design, room design, furniture design, light design etc with the help of which you can build your dream home.

IMPORTANCE OF FENCING

There are many practical benefits of placing a fence around your home. Security is one of the main reasons why people install fences. A fence comes especially handy if you reside in an area that has proximity to a wildlife reserve, as it will prevent wild or stray animals from entering your property and causing harm to you and your family. Fencing is also important from the privacy point of view if you are worried about neighbours to intrude or spying on you. Further, if you are negligent, encroachment may also happen. If you have fencing around, it will help you to define your property lines perfectly and legally.

FACTORS GOVERNING INSTALLATION OF FENCING

01. PURPOSE

The first step is to decide for the purpose for which you want to install a fence around your home, i.e. privacy, security, etc. Regardless you are staying in a commercial area or in residential area security, and privacy is your main concern before adding fencing around the boundary of your area. Suppose, you are staying within a gated community, then also you need fences to beautify your surroundings as well as to have a bit of extra privacy in your life.

02. AESTHETICS

Regardless of your primary motives for having fencing installed around your home is secure, you must not compromise with the home's aesthetic appeal. You can choose from wide varieties of fencing design and materials such as wood, chain link, stone, etc. if beautification is one of your leading motives behind creating the fencing.

03. BUDGET

There are multiple options available in the market for fencing; however, your budget can be a deciding factor. Rather, you need to first decide, how much you can spend easily without being burdened for creating a fence of your choice.

04. LIFE

Choose the fence material in such a way that it will survive long. It should stand firm against weather conditions. Stone fencing offers better endurance than a wood fencing.

05. MAINTENANCE COST

Some fencing requires periodic maintenance, i.e. remove staining, painting, cleaning, etc. So, you need to consider the maintenance cost. Low maintenance fence is obviously a better choice.

06. LOCAL AVAILABILITY

Before you decide which type of fencing you are going to install, first find out if the fence material is available in your locality. Easy transport will come cost-efficient for you ultimately.

DIFFERENT TYPES OF FENCES

1. BRICK WALL FENCE

- The most common, traditional and largely used yard fencing is a brick wall. It is one of the preferred methods in residential colonies, particularly in India, rather in Asian and African countries.
- Brick and mortar are used for the same, and you can raise the wall's height according to your choice. Both low as well as high boundary walls are possible to build. It is all on your preference and choice. Many prefer to go for creepers to cover the part of brick wall fencing or make it colourful by getting painted with good quality exterior paint. You can also have a combination of brick wall with other options like iron fencing, barbed wire, etc.
- There are endless design opportunities in the brick wall. It is fire and weather resistant.
- The disadvantage of brick wall fencing is, it is difficult to relocate. It is an expensive affair, need a lot of money. Besides construction of your home, you have to spend hefty for building a brick boundary wall.
- This will occupy a width of 9" to 12" and hence it will reduce your area of land use for other purposes. This is very critical especially in urban areas.

2. STONE WALL WITH IRON FENCE

- Stonewall with iron fencing is a classy fencing type, and it gives a look of the fort to the home.
- You can get a stone wall raised up to the knee length and fence it with iron grills in your preferred design.
- Get the pillars built of stones, it balances the boundary wall, and it is sturdy enough. It is low maintenance and it is highly durable, and it stands firm in weather turbulence even.
- The iron fences require painting at periodic interval to stay saved from rusting. But the stones last for a lifetime almost.
- Due to the higher width needed, this too will reduce available land portion.

3. PRECAST CONCRETE FENCE

- They are very popular nowadays.
- **Precast concrete** panels are shaped in the metal mould in factories.
- It's fast and easy to install, long-lasting (durable), and easy to maintain.
- Precast concrete fences are less expensive than wood fences in the long run.
- Various design options can be explored if there is a huge wall or else you will have to choose from the manufacturer's provided options, which may be limited.
- These panels are heavy in weight and need erection machinery with a skilled worker for installation.
- They are fireproof, termite proof, climate resistant, and also difficult to break.
- Low maintenance cost is an added bonus.

4. WOOD FENCE

- Wooden fences are popular in the USA, Canada, etc. and particularly in semi-urban or rural areas.
- A durable **wood** fence adds a warm feeling to your home. It is available in pickets, panels, logs, lattice, and posts. If you have soft nose for privacy, go for panels.
- Always go for the best kind of wood that can withstand the weather variations. Get it season-proof and termite resistant, so that the **issues of termites do not come**, which otherwise may affect the life of the wood fence.
- Natural colour-treated wood is a good choice as it improves and enhances the appeal of the property.
- The cost of a wood fence depends upon the quality of wood and the thickness of the used planks, apart from the length and height of the same.
- You can grow vines to cover the pickets and lattice designs; colourful blossoms will add life to your fence.
- Pine, Fir or Spruce, Cedar, and Cypress are better options for making wood fences. There is a wide range of wood fence to choose from, and you can select the one that fits your needs and budget limitations.
- It can be painted in different colours if you want to add vibrant life to your surroundings. The drawback is that wood is not fire-resistant and may not stay stable during temperature changes as it can expand or contract at random. You also require professional assistance to get it screwed properly and pacify the expansion and contraction related issues to enhance its endurance.

5. CHAIN LINKED FENCE

- As the name suggests, chain linked fence is made up of links of galvanized steel that have been twisted together and fixed to upright Mild Steel / Galvanized Iron/ Concrete poles.
- It is an ultimate utility fence which is durable, affordable, and demands low maintenance. This type of fencing comes in ready-to-assemble parts and is easily worked in custom lengths and configurations.
- Chain linked fencing is easy to install than other types of fencing, and installation can be done fast.
- A chain link fencing does not provide much privacy as compared to wooden, vinyl or brick fencing but it performs other functions quite well. However, you can grow natural shrubs and vein to create privacy. You can also tie green nets for privacy.
- However, chain link fencing is not ideal from the security point of view. Most residential chain-link fences are 4-5 feet tall, and the chains themselves make the fence fairly easy to climb on. Thus, it only secures your property line, animals, etc.
- It is a cheap option when compared to other types of fencing.
- However, unlike barbed wire fencing, it can prevent the entry of street dogs, etc. and does not become loose after its use.
- Its life is less than that of brick or stone wall but more than barbed wire fencing.

6. BARBED WIRE FENCE

- Barbed wire fencing usually consists of two longitudinal wires twisted together to form cable and having wire barbs wound around either or both of the cable wires at regular intervals.
- It is not very attractive by look.
- It is perhaps the cheapest and easy to install fencing option.
- It is fixed on either precast cement poles or M.S. angles or channels.
- Thieves or animal trying to pass through or over barbed wire will suffer discomfort and possibly injury, however, there is no absolute bar.
- It cannot be installed in tall heights. You can also install it over the compound wall for advanced safety.
- It requires periodical maintenance.
- It can be replaced and reinstalled.
- It can withstand all weather condition.
- Its life is lesser than the wooden fencing.
- It is a privacy compromised fencing.

7. UNCUT BOULDERS FENCE

- Uncut Boulders' Fence gives your yard and your landscape altogether a different look.
- It is strong and durable and it adds a rustic look on the fencing as well as on the landscape.
- It is easy to maintain. Boulders of various sizes are available out of which you can utilize odd and even sizes.
- It is safer because intruders hardly can peep in.
- This fence is more common an option in mountain and plateau region where boulders are easily available at affordable cost, and being the native material skilled workers are also easily available to get the fencing done.
- It withstands the extremes of nature, and even in fire breakout, there won't be any destruction.
- The weaker aspect of uncut boulders fence is that it takes time to build, it is time-consuming, and you require skilled artesian to arrange and add aesthetic value to your property.
- It is difficult to replace in the long run. Go for it if you really wish to be surrounded by natural elements.

8. ALUMINIUM FENCE

- If you are looking for an ornamental fence that can add beauty to your home as well as a low maintenance product, no doubt the aluminium fence is the answer.
- During the time of installation, you are required to paint and decorate it. Once done, you are free from further botheration of rust. Powder coating aluminium fence is a better option to withstand weather changes.
- It is easy to install, environment-friendly, and lasts longer.
- The disadvantage of aluminium fence is that it is not the right material from the security point of view because it is not as strong as you may think, although nowadays they have switched to rivet system which provides better strength to the fences.
- You can adorn the walls by growing climbing creepers on them. It will look beautiful and will add privacy from pesky people and trespassers.

9. VINYL FENCE OR PVC FENCE

- Vinyl fencing has all the attributes that you are searching for in a fence. It is also popular as a PVC fence.
- The PVC stakes and pickets are used for the purpose. They are either connected with adhesives or screws are used to fix them. You cannot vouch for sturdiness really.
- It is a low maintenance fencing option, durable, privacy protected, and offers a pleasing appearance without the hassles of traditional fencing although these have a bit higher cost.
- It is available in different colours, and you can choose the colour that appeals to you most.
- More and more people are opting for the vinyl because of durability, and there is no wear and tear due to changes in climatic conditions.
- These fences are available in panels also. If you want to enjoy total privacy and keep the stray animals away from intruding in your garden space, it is a viable option.
- Various designs are available, from simple ones to intricate. You can choose one that suits your lifestyle, budget, and personal choices.
- Cleaning is easy; you will require a household cleaner and water, and all stains will get vanished in an easy go.
- It is one time investment and you can maintain with negligible recurring cost.
- It is affordable and it lasts for years if kept away from fire. Please note it is not fire resistant.

10. BAMBOO FENCE

- Bamboo fencing is frequently used for **partitions** and fencing the yard.
- Bamboo colour is not the same all around. Therefore, it gives a natural look. It has a shaded pattern and mostly look beautiful.
- If you want to cover for more privacy, go for bamboo sheets with negligible see-through effect.
- To increase the life span of bamboo, paint it with black tar. It will not rot, but its natural beauty may get compromised. However, you can try transparent protective colours.
- You can also get the bamboo rolls adjusted in a wooden frame in the top and bottom frame. It gives a clean look and increases the longevity of the fences. It is best for the places where you have to counter less rainfall because rain damage bamboos.
- It is not expensive, and you can enjoy being with nature.

11. LIVING FENCE

- If you are a nature lover and wish to decorate your yard with trees, it will act as natural fencing, adding a beautiful view to your home.
- You can use trees which grow up to a height of 8-9 feet, and it will be ideal for the support of the fencing.
- You will get free oxygen, and it will also add natural green beauty to your space, along with the natural non-toxic barrier.
- You can grow bushes and shrubs in between the areas of trees. It will look great.
- It is the best for your health and greenness of your home, but you have to maintain it by watering, manuring, and pruning at periodic intervals.
- Tree fencing is ideal for gated villas and gated colonies.

TYPES OF SECURITY FENCING AND THEIR USES

TYPES OF SECURITY FENCING

There are many types of security fencing available today. However, the kind of security fence anyone would prefer on their property usually depends on the particular purpose of why they want to erect one in the first place. Other factors that may have to be taken into consideration include the type of property, climate, position, and soil topography or terrain. The following are some of the different types of security fencing available, and how you would benefit from each of them.

1.PALISADE FENCING

Palisade fencing is available in either a 'D' or a 'W' profile, with 'W' providing the higher security of the duo. One of the distinguishing features of palisade fencing is that it is available in different heights as required by property owners. It is built with extremely robust materials and it is weather resistant. Due to its imposing height, it is a strong physical barrier to invaders as it is difficult to climb on or jump over. It can also be finished to become rust-resistant, and thus is very durable.

The most preferred type of palisade fencing is steel palisade, majorly because of its malleability and ease of installation. Steel palisade fencing is widely used to provide comprehensive security and restrict access to large industrial sites and dangerous locations such as power stations and railway lines. Also, it can be used to secure any commercial structure or premises with a high incidence of crime or vandalism.

2.MESH FENCING

A mesh fence is a steel fence with wire strands welded together to form a very strong barrier around an area. Mesh fences are used primarily where visibility through the fence is required. This security fencing can be made from strong steel or galvanized stainless steel. A common type of mesh fencing is V-mesh fencing, where V-shaped wires are welded at the top of the fence.

Mesh fencing is a popular barricade used by homeowners in urban and rural areas, mainly due to its versatility, low cost, robustness, and aesthetic appeal. This is why it is also ideal for public areas such as playgrounds, sports grounds, and parks, where visual appeal and security are desired. Also, mesh fencing can be installed at a greater height than wooden fences and acts as a durable barrier to protect your premises against roadside animals, human intruders, and vandals.

HIGH-SECURITY FENCING

Other than other types of security fencing, high-security fencing has proven to be a highly effective deterrent against intruders, criminals, or vandals. Various enhancements and additional security features can be added to many fence types to make them provide high security. Typically, high secure fencing is usually installed with electric power, CCTV coverage, or trigger alarms.

Due to the flow of electric current across the fencing, it is almost impossible for intruders to break into your property as this can be hazardous. Due to the added level of protection high-security fencing provides, it is mainly installed at important places such as banks, government headquarters, and power substations.

MEDIUM-RANGE SECURITY FENCES

Steel fences are a compromise between cheaper (chain-link) and more expensive (wrought iron) metal fencing. They're durable and better looking than chain-link fences, but don't offer privacy given their structure.

LOW-RANGE SECURITY FENCES

Chain link fences are an economical way to fence in your property and keep everyone safe. Chain link is also one of few fence materials that creates a secure barrier without impeding your sightline. And chain link fencing is tough, with very little maintenance required over the years.

Chain link fences can be a bit tricky to install because nearly every component is unique to this type of fence. But after you've constructed one post-to-post stretch of chain link fence, all other sections are easier to build.
